Artificial Grass Adhesives & Tools

Henko 670 Rotation Brush

Henko 670 Rotation Brush

The brush on this engine driven device is for brushing artificial grass both for installation and maintenance and has been especially designed and made to our own specifications. The special 'hair' in the brush prevents any damage to the artificial grass fibers in the turf while still performing the proper cleaning and comb action. It will make the seams less visible, remove debris, comb the fibers, and brush the infill (if applicable). The 4-stroke petrol engine requires little maintenance and is very economical. Wide handle-bars give good directional control and good grip. Replacement brushes can be ordered through Henko A&T in the Netherlands.

Functions

Brush Width	65 cm
Forward Gears	1
Forward rotation speed (rpm)	197 tpm

Dimensions

Dimensions (L x W x H) (cm)	70 x 65 x 70
Weighth (kg)	28

Engine

Engine	4-takt OHC
Engine type	GXV50
Cylinder Capacity (cc)	49
Net power (kW/tpm)	1,3/4.800
Fuel tank capacity (Liter)	0.35
Engine oil capacity (Liter)	0.3
Starter	Recoil starter
Drive centrifugal	Clutch Mechanical-
Drive gear	Worm gear
Sound pressure at ear level (dB(A))	79
Guaranteed noise level (dB(A))	93
Vibrations (m/sec ²)	5

Handlebar

Foldable handlebar
