- Solvent free
- Fast setting
- High strenght
- Environment Friendly
- Fast activation

Attention

*Values are determined at 20°C/65% Rh. Results can be different in the field and we always suggest testing.

Uses

The 1-component H400 and H700 adhesive is specially designed for landscaping or smaller area's in the artificial grass installation. It's also a very good adhesive for repairing purposes.

Processing

Apply adhesive with the manual coating machine (Henko 601) or notched trowel evenly on the suitable seaming tape. Install floor covering during laying time and rub or press down firmly.

Work Conditions

Our 1-component adhesive H400 and H700 are best used between 5°C-30°. Moist will benefit the adhesive and will result in a quicker curing time. Beware of too much moist, we always advice that the adhesive is tested before using it. This way you can prevent using it in an area with too much moist, which will harm the quality of the adhesive.

Environmental aspects

Due to the composition of the product, there are no limitations with regard to handling, storage or processing. For more detailed information please refer to our Material Safety Data Sheet.
